Build your MVP with AI!

July 30, 2025

Cursor Riyadh

Our Partner

Hosting Partner

Agenda

6:00pm 🎯 **Introduction** 30 min

Choose partners, choose problems to solve

6:30pm 🚀 **BUILD TIME!** 2.5 hours

Build your MVP with AI tools - we're here to help!

9:00pm 🎤 **Presentations** 30 min

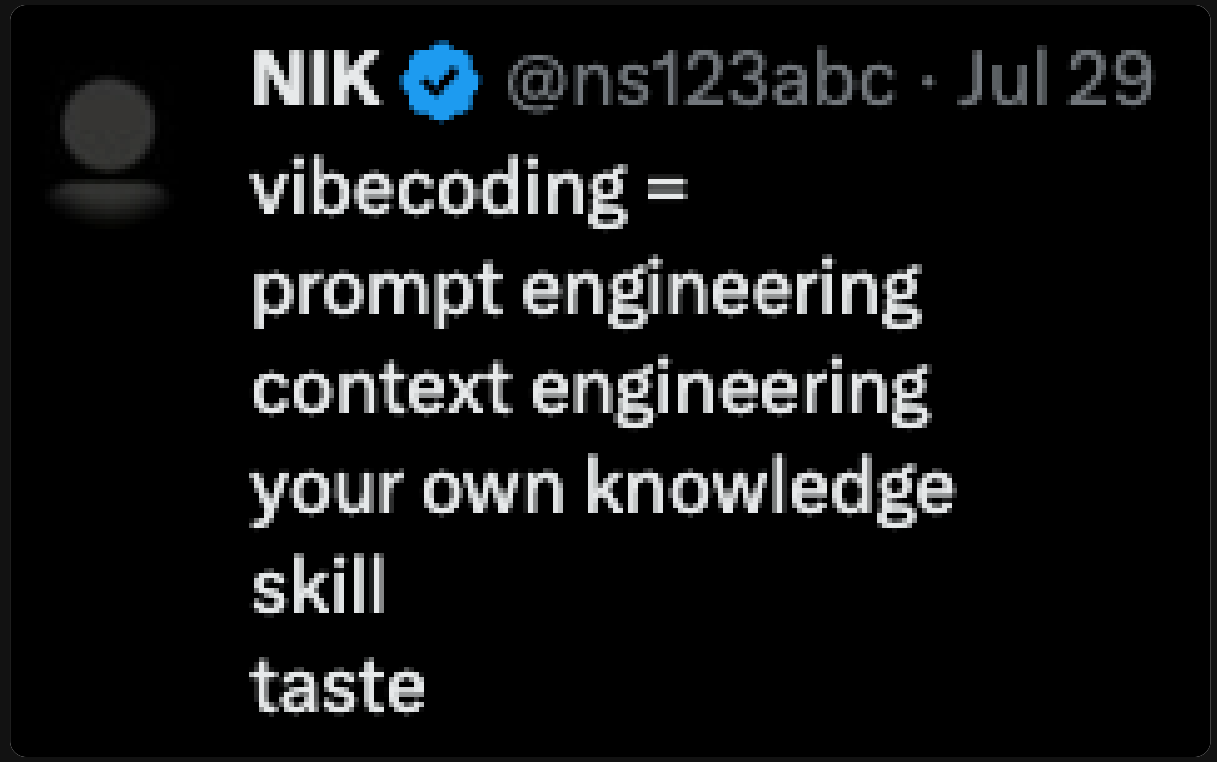
Show off your creations to the group

9:30pm 🎉 **Wrap Up**

Meetup Introduction

Setting the stage for our Cursor journey

What is vibe coding?



NIK @ns123abc · Jul 29
vibecoding =
prompt engineering
context engineering
your own knowledge

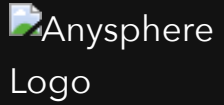
Cursor

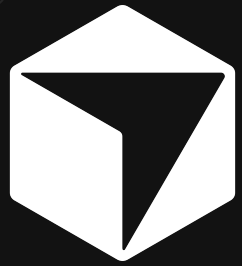
Anysphere (parent company)

- $9B valuation (May 2025)
- $900M funding raised
- Fastest-growing AI startup

Cursor (the product)

- AI-native code editor
- Built on VS Code foundation
- ~1B lines of code generated daily





Why This Meetup?

Knowledge Sharing

Learning from global best practices

Developer Community

Building a strong local AI development ecosystem

Innovation Hub

Positioning Riyadh as an AI development center

Vision 2030

Aligning with Saudi Arabia's tech transformation

What to expect

In-person

- Talks by local experts
- Hands-on workshops
- Networking opportunities

On Discord

- Sharing knowledge, tips, and tricks
- Virtual hackathons (with prizes)
- Community discussions

Everything About Cursor

Deep dive into Cursor's capabilities and practical usage

How LLMs Work (The Basics)

Input

Your prompt + context

Model

Neural network predicts next tokens

Output

Generated code/text

LLMs in Code Editors Made Simple

🎯 You Say:

"Make this button green"

👀 AI Sees:

Your code + files + request

🧠 AI Thinks:

"Based on patterns, this needs CSS changes"

✨ AI Delivers:

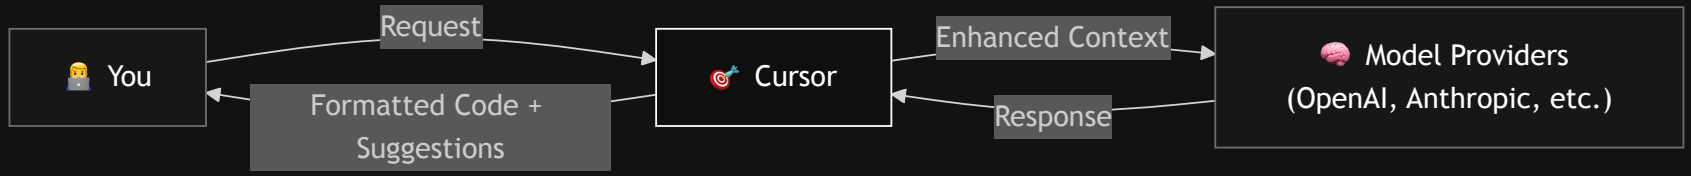
Updated code with green button

🔑 The Secret

Better Context = Better Results

- Include relevant files
- Describe your goal clearly
- Show error messages
- Provide examples when helpful

Cursor: The Smart Middle-Man



Core Cursor Features

⭐ Cursor Tab

Next-gen autocomplete

- Multi-line suggestions
- Cross-file awareness
- Fusion Tab Model

⌨️ CMD+K

Inline code magic

- Quick edits
- Natural language commands
- Instant refactoring

💬 Chat

AI coding partner

- Four powerful modes
- Contextual assistance
- Background agents

🤖 Agent Mode

- Autonomously learns codebase
- Makes codebase-wide changes
- Background processing
- Perfect for large refactors

🎯 Manual Mode

- Focused edits with your context
- Full control over AI visibility
- Perfect for sensitive code
- Precise, controlled assistance

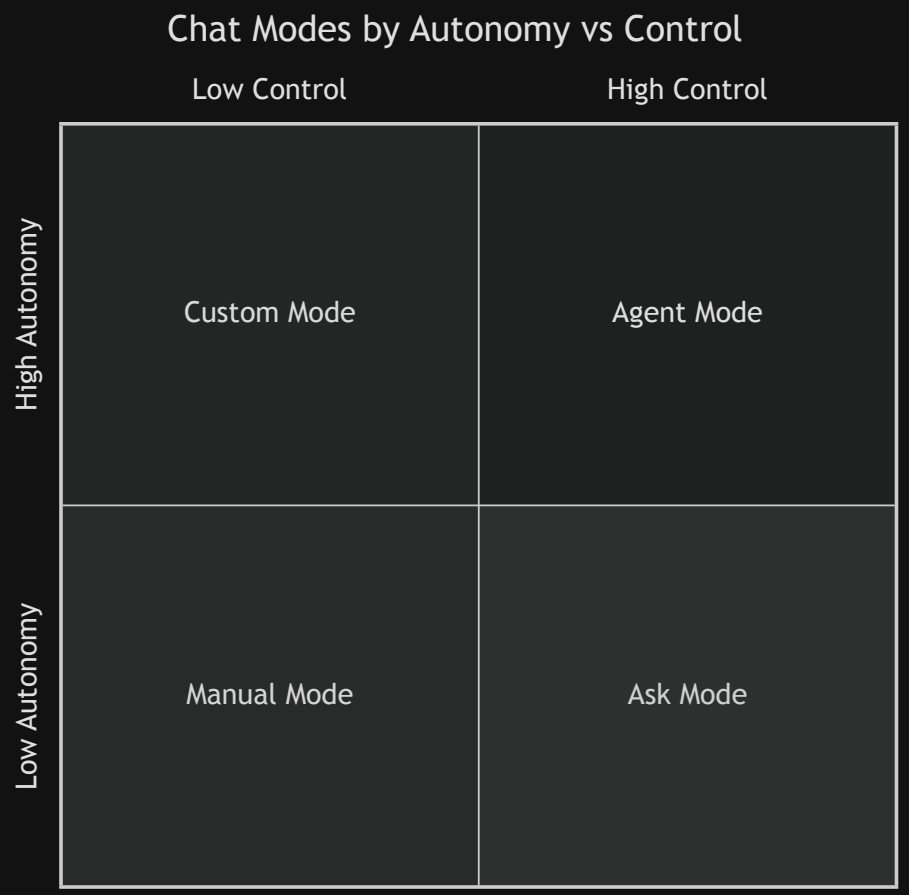
❓ Ask Mode

- Get code explanations
- Plan new features
- Understand complex logic
- Educational and exploratory

⚙️ Custom Mode

- Create workflow-specific modes
- Tailor AI behavior to team needs
- Unlimited customization
- Enterprise-ready configurations

Chat Modes Deep Dive



Features

- 🎯 **Context Enhancements**: Smarter file and directory inclusion
- 📚 **Docs**: Enable AI to use human-readable documentation as context
- 🎯 **Rules**: Set up user-specific or project-specific rules to guide AI behavior
- 📝 **AI Commit Messages**: Intelligent git commit generation
- 💾 **Checkpoints**: Restore previous states easily
- 🔗 **Multi-Root Workspaces**: Manage multiple repositories with cross-folder indexing
- 🏗️ **Model Context Protocol (MCP)**: Interact with external tools
- 🔄 **Background Agent**: Parallel task execution for larger tasks (early preview)
- 🐛 **Bugbot**: Automated bug detection and fixing
- 📑 **PR Index**: Pull request analysis and management (Ultra plan)
- ⚡ **Enhanced Tab Model**: Multi-file edits, refactoring, and navigation
- 🎨 **Refreshed Inline Edit**: Improved CMD+K with new UI and options
- 🧠 **Max Mode**: Token-based pricing for complex tasks requiring extensive context
- and much more…

Live Demo

Cursor in action

Common Pitfalls to Avoid

1. ❌ **Vague requests** without sufficient context
2. ❌ **Ignoring error messages** and logs in your requests
3. ❌ **Not using project rules** to guide AI behavior
4. ❌ **Overwhelming AI** with irrelevant information
5. ❌ **Expecting perfection** on first try - iterate!
6. ❌ **Not exploring models** - each has its strengths

Best Practices & Tips

1. 🎯 **Context is King**: Provide clear, relevant context
2. 🔍 **Provide error messages**: AI can't fix what it doesn't know about
3. 📋 **Use Rules**: Set up project-specific guidelines
4. 🔍 **Leverage @ Symbols**: Be explicit about what you want
5. 🔄 **Iterate**: Start broad, then refine your requests
6. 🧪 **Experiment**: Try different models for different tasks

Pricing

🆓 Hobby

Free

💼 Pro

$20/month

➕ Pro+

$60/month

🚀 Ultra

$200/month

🏢 Teams

$40/user/month

Memory Bank & Advanced Usage

Using Cursor for everything - Demo by @ma7dev

This Section Has Two Parts

🧠 Memory Bank

Giving Cursor Agent the steering wheel
(vibe-coding)

🚀 Advanced Usage

Using Cursor for everything
(beyond coding)

What is Memory Bank?

🧠 Concept

- Inspired by Cline Memory Bank
- Gives LLMs more context to plan and act
- Human-readable AI contract
- Updates and evolves over time

🎯 Purpose

- Persistent project knowledge
- Context that survives sessions
- Intelligent task planning
- Continuous learning from progress

Memory Bank: Three Parts

Setup

Define project foundation

Planning

Initialize & review progress

Execution

Implement & update

Part 1: Setup

⚙️ Foundation Building

📝 Define Project Description

- Project goals and objectives
- Technical requirements
- Architecture decisions
- Team conventions

🔄 Iterate & Refine

- Use Cursor Agent to help
- Refine based on feedback
- Update as project evolves
- Keep it human-readable

Part 2: Planning

🧠 Strategic Thinking

🤖 Model Choice

- **o3** (expensive but powerful)
- **Sonnet-4** (balanced option)
- Choose based on complexity

📋 Process

1. Initialize memory bank with Agent
2. Review memory bank content
3. Iterate & refine memory bank (especially progress)

Part 3: Execution **(Sonnet-4)**

1. Start Fresh

Always start with a new chat

2. Implement and interact w/ AI

- Start with progress context
- Review changes actively
- Interact with AI

3. Complete & Update

- Review git changes
- Take code ownership
- Update memory bank before next task

Live Demo

Memory Bank in Action

Using Cursor for Everything

💻 Development

- Code generation & refactoring
- Bug fixing & debugging
- Documentation writing
- Test creation

📝 Beyond Code

- Technical writing
- Architecture planning
- Code reviews
- Learning new technologies

🏢 Team Workflows

- Onboarding new developers
- Code style enforcement
- Knowledge sharing
- Project standardization

🚀 Advanced Usage

- Custom model integration
- Workflow automation
- Multi-project management
- Performance optimization
